Clovermist Precast Concrete Vault Toilet

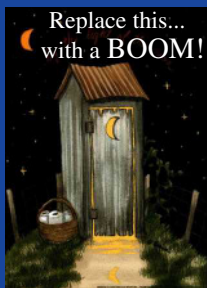

BOOM Concrete, Inc. is a manufacturer of Precast Concrete toilets, buildings, septic tanks, cisterns, well pits, and landscaping products. All of our products are designed and built with high quality components in a climate controlled facility located in Western South Dakota.

The CLOVERMIST:

The Clovermist is a single person vault style toilet that is precast in several sections and assembled into a complete one piece unit. It is off-loaded into your excavated site and is ready to use in just minutes.

ADA COMPLIANCE:

BOOM Clovermist vault toilets are designed to comply with ADA accessibility requirements for persons with disabilities. The comfort station is equipped with two grab bars, a handicap toilet riser, assessable doors and 60 inch turning space to accommodate a wheel chair.

Clovermist Precast Concrete Vault Toilet

LOW MAINTENANCE COSTS:

The BOOM Clovermist is constructed out of precast concrete so there is little chance of damage or decay. The interior walls are a smooth, white epoxy surface that can be easily hosed out, thoroughly cleaned and are vandal resistance. The standard exterior walls have an exposed aggregate finish for a pleasing look that goes with most landscapes. Several other exterior finishes are available. The BOOM Clovermist will withstand the most extreme conditions that Mother Nature can throw at it and come out looking like new for years to come.

SWEET SMELLING TECHNOLOGY - "NEW AND IMPROVED"

The US Forest Serviced developed the "Sweet Smelling Technology" which is a unique design for controlling odors in vault toilets. BOOM Concrete has enhanced these design elements in order to greatly improve the concepts of "Sweet Smelling Technology" which has made the BOOM Clovemist completely odor free. There is a noticeable difference between the BOOM Clovermist and other vault toilets on the market. The key to "Sweet Smelling Technology" is the one directional movement of fresh air into the toilet, through the toilet riser into the storage vault.

This fresh air then mixes with the toilet odors and exits the toilet through the vent pipe. This system uses Mother Nature's natural powers of the sun and the wind to keep the positive airflow and odor moving in the right direction. And this is where the BOOM Clovermist has teamed up with Mother Nature by designing a solar heat chamber into the dark colored concrete roof of the BOOM Clovermist. The sun's rays heat up the concrete that surrounds the heat chamber causing the warm air to rise out the vent. This enhanced positive airflow through the toilet eliminates all obnoxious odors in the interior of the toilet that were once associated with the previous style outhouse.
